The Venetians built their city in a very special environment, a lagoon with periodic slack tides. Every effort was made to make this difficult terrain inhabitable: they “built” the land and defending it from the tides; since they did not have groundwa.

The reason is so that the situation of the marina will be always related to its surroundings; this is of param-
The canals, the paving, the bridges, the historic chase, the wooded parapets and the alleys are all elements that "shape" the city of Venice, that make it alive and unique.

What problems does such an ancient and unique city face?

How can we avoid the decay that blights it?

How does the "Venetian system" work?

Venice: a project for Venice

Preservation and urban maintenance
